

# MATHS IN MOTION

I am from Australind, Western Australia and I have never taken part in something like Maths in Motion before. My role in the team is measuring the track, calculating fuel and evaluating the features of our car.

We are most proud about getting to the World Final and representing our school and Australia. I know our car has the potential to win because we are passionate about cars and engineering, but also our Aussie charm could give us the edge! I have become good friends with Cameron through this process. We both share the same interests and feel teamwork has been very important to us. We began preparing for this event in January. Creating and racing the car has been the most exciting part and today looking around the museum has been truly fascinating. Coming to the UK has been fantastic!

Maths in Motion has helped me heighten my ability in maths and I would love to work in science and engineering one day. I feel you always need maths in everything you do and this experience is a great opportunity to enhance these skills.

Also I love the F-type Jaguar here today – it's awesome!
